 org. acid elimination in, of diabetics with acidosis, 3965¹.
 output of normal animals and those in which the kidneys have been denervated, 2893⁹.
 in pancreatectomy, ratio of glucose to N in, 2728¹.
 of pellagrins, amino acid fractions and hippuric acid in, 2732¹.
 pepsin content of, diagnostic value of, 4278¹.
 phosphate content of, in the post-absorptive period, 742¹.
 phosphate excretion in, during water diuresis and purine diuresis, 2894¹.
 phosphoric acid excretion in, 2898⁹.
 pigmentation in, chromogen of biliary red as cause of, 2713¹.
 porphyrins in, and fluorescence, 1787¹.
 potassium iodide excretion in, 2733¹.
 preservation of liquid manure, 4002⁹, 4234¹.
 proteic acids of, 3490⁹.
 proteolytic enzymes of, contg. protein, 3490¹.
 pyruvic acid in normal and diabetic, 3510¹.
 ratio of output of, to blood output as estn. of renal work, 3943¹.
 reaction of Sgambati in acute peritoneal infections, 2547¹.

 chemistry and clinical significance of, 122^a.
 detn. in urine of infants, 2340¹.
 in duodenal contents before and after MgSO₄ introduction, 2727^a.
 in duodenal contents, increase in concn. of, by intravascular hemolysis induced in patients with paroxysmal hemoglobinuria, 2727^a.
 spectral properties of, 2877^a.
 in urine in influenza and influenzal pneumonia, 287^a.
- Urobilinemia**, in disease, 3339^a.
 "enterohepatic" theory of, 2340^a.
- Urobilinogen**, secretion from kidneys, differential diagnosis of uremia by, 1806².
- Urochrome**, as chlorophyll deriv., 1453¹.
 nature of, 727^a.
- Urochromogen**, excretion in diseases of women, 3969^a.
 nature of, 727^a, 2580⁴.
- Uroformine**, book, 2580⁴.
- Urotropine**. See *Hexamethylenetetramine*.
- Uroxanthin**. See *Indican*.
- Urtica dioica**. See *Nettle*.
- Urusene**, 2330^a.
- Urushiol**, constitution of, and proof that it is a mixt., 2330^a.
 poisonousness of, 2332^a.
- Ustilago violacea**, conditions of copulation and secondary sexual characteristics in, 2937⁵.
- Uteramine**, as ergot substitute, 755^a.
- Uterus**, adrenaline action on, reversal by change in ion concn., 3336².
 adrenaline and the isolated, 1114^a.
 adrenaline effects on, influence of atropine on, 3706^a.
 carcinoma of, N metabolism during Ra therapy of, 287^a.
 effects of intravenous injections of fluids, 2935¹.
 effects of popular drugs on isolated guinea-pig, 3707².
 ergot action on the isolated, 2553^a.
 ergotin and, 3512².
 ergot substitutes and, 2935^a.
 mucous membrane of, anticoagulating substances in, 1613^a.
 quinine action on, 592^a.
 salicylates and, 2935^a.
 secretory cycle in horns of, of mammals during heat period, 3690⁴.
 stimulants, assay of, 2197^a.
 stimulation of surviving, by organ exts. and dialyzates, 1267^a.
 tuberculous horn, allergic reaction of, 3120¹.
- Vaccination**, acridine dye lymphs for, 1981¹.
 anthrax, 748¹.
 hydrogen ion concn. of blood after, 3964⁴.

 detoxicated, P 1836^a.
 euglobulin of, sp. action of, 1460¹.
 gonococcal, preserving antigenic properties in glycerol, 286¹.
 immunity, 746^a.
 lipo-, immunity tests with, 437^a.
 microorganisms in, destruction of, 2161¹.
 paratyphus-B, 3325^a.
 prepn. of, use of dry heat in, 2725².
 review, 3967^a.
 saline, immunity tests with, 437^a.
 variations experienced in use of, 4242^a.
- Vaccinium oxycoccus**, adulteration of juices of, testing for, 2163^a.
- Vacuum**. (See also *Electron tubes*; *Evaporators*; *Pumps*; and "low" under *Pressure*.)
 application of research methods to factory scale, 1626^a.
 elec. conduction in extreme, 1181^a.
 producing, P 800^a.
 restoration of, of thermopile by metallic Ca, 4097^a.
 Volta effect in, 377^a.
- Vacuum containers**, in chem. lab., 869⁴.
 for liquid air, adsorbents for, 185^a.
 liquid air losses from, by evapn., 1640¹.
- Vacuum pump**. See *Pumps*.
- Vacuum tubes**. (See also *Coolidge tubes*; *Electron tubes*.)
 filaments for, P 389^a.
- Vagus**, action, reversal by quinidine as seen in heart of cat, 2933².
 chem. modifications of, during digestion, 2169^a.
 effect of cocaine and aconitine on the pulmonary, in the frog and in the turtle, 2555¹.
 effect of section of, on diaphragmatic tonus, 2904¹.
 excitation of, action of BaCl₂ on heart and, 1464^a.
 inhibition of heart beat by, effect of Ca and K ions on, 3972^a.
 peripheral antagonism of, and sympathetic system in frog, 3117^a.
- Valency**. (See also *Affinity*.)
 allotropy as a function of, 180¹.
 books: Valenzkräfte und Röntgenspektren, 1185²; Electronic Conception of, and the Constitution of C₆H₆, 1903²; Natur der, 2448^a.
 coordination and, 667^a.
 coordination theory of, in relation to adjective dyeing, 1870¹.
 decompn. of, 1688^a.
 detn. of state of, in compds. of lower-valent elements, 3279^{1,2}.
 detg. factor of, 1890^a.
 effect on permeability of plant cells of changing the, of an ion, 2348^a.
 electronic interpretation of certain biochem. phenomena, 1101⁴.
 forces between atoms in mols. and in space lattice, 514^a.
 inadequacy of ordinary ideas of, 2253^a.
 induced alternate polarities and free, partial, and latent, 2049^a.

—, γ -benzyl- γ -hydroxy-, methyl hemiacetal, 1398^o.
—, γ -hydroxy- γ -phenyl-, and methyl hemiacetal, 1397^o.
- Valeramide**, β -cyano- α , γ -diketo-, bisphenylhydrazone, 1080^o.
- Valerandlido**, β , β , γ -trichloro- α -hydroxy-, 3063^o.
- Valerates**, detn. of, 2817^o.
- Valerian**, history and therapeutic properties of, 1126^o.
sedative properties of tinct. of, 970^o.
- Valerie acid**, diethylthallium salt, 1209^o.
diphenyllead salt, 2855^o.
sodium salt, P 105^o.
—, γ -amino-, nitrogen liberation from HNO₃ and, rate of, 3917^o.
—, δ -amino-, nitrogen liberation from HNO₃ and, rate of, 3917^o.
—, α -amino- δ -guanido-. See *Arginine*.
—, δ -benzamid- γ -keto-, derivs., 1427^o.
—, α , δ -dibenzamido- γ -keto-, derivs., 1427^o.
—, γ -hydroxy-, lactonization of, velocity of, 2439^o.
—, γ -keto-. See *Leulinic acid*.
—, α -keto- β -(hydroxyiminomethyl)- γ -imino-, lactone, 1060^o.
- , α -keto- β -(hydroxyiminomethyl)- γ -phenylimino-, lactone, 1080^o.
—, γ -methyl-. See *Isocaproic acid*.
—, β , β , γ -trichloro- α -hydroxy-, 3063^o.
- Valerophenone**, α , β , γ , δ -tetrabromo- β [(β , γ -dibromo- γ -phenylpropylidene)-amino]- δ -phenyl-, 558^o.
- Valine**, from lactalbumin by hydrolytic cleavage, 108^o.
- Valinecholins**, dl, and salts, 3870^o.
- Valinol**. See *1-Butanol*, 2-amino-3-methyl-.
- Valonia**, adsorption of sol. matter from solns. of, by hide powder, 1678^o.
tanning ext., 2792^o.
- Valves**. (See also *Rectifiers*.)
acid, 316^o.
alloy for, and valve seats, P 233^o.
for coke-oven furnaces, P 4053^o.
double-cased, 1889^o.
double, for gas absorption app., 513^o.
electrically operated gate, 2213^o.

III. FORMULA INDEX

KEY.

In using this index the following should be borne in mind:

1. The Formula Index is **supplementary** to the Subject Index; in no sense does it replace any part of the latter except that many organic compounds that were not named in the original papers are entered in the former only.

2. **Inorganic as well as organic compounds** have been entered.

3. **Entries under their own formulas** are made for all strictly inorganic and strictly organic compounds and for the true organic derivatives of organic compounds, both addition compounds and true reaction derivatives (this includes esters, hydrazones, methohalides, oximes, picrates, semicarbazones, etc.). Inorganic salts of organic acids and inorganic addition compounds of organic compounds (hydrohalides, chloroplatinates, perchlorates, sulfates, etc.) are not given separate entries but are indicated in modifying phrases under the formulas of the compounds from which they are derived (under the acid in the case of a salt), unless the exact nature of the compound is uncertain, when an entry is made under its own formula. Salts of formic, acetic and oxalic acids are exceptions; these are entered as such.

4. **The arrangement of symbols in formulas** is alphabetical except that in carbon compounds C always comes first, followed immediately by H if hydrogen is also present.

5. **The arrangement of formulas** is also alphabetical except that the number of atoms of any specific kind influences the order of compounds. *E. g.*, all formulas with 1 C come before those with C₂, thus: CCl₂O, CCl₄, CHCl₃, CHN, CHNO, CH₂Br₂, CH₂O, CH₃Cl, CO, C₂Ca, C₂H₄O₂.

6. **The arrangement of entries under any heading** is strictly alphabetical according to the preferred names of the isomers.

7. **Entries consist of** (a) the formula (in bold-face type), (b) the name as it has been entered in the Subject Index (in light-face Roman type; *it should be noted particularly that the part of the entry in this type is the exact equivalent of the formula given*), (c) the name used by the author if it differs materially from the preferred one chosen for the Subject Index or occasionally some other more or less common synonym (in brackets and begun with a capital letter to help make it clear that it is not a part of the other name), (d) occasionally a modifying phrase or word such as "Ca salt" or "hydrochloride" (in italics, different type being used to set off that part of a compound being indexed which is not represented in the formula used; see ¶ 3 above), (e) the page reference, and (f) the

fraction of the page in ninths (indicated by a small superior numeral) in which the compound will be found.

8. **Cross-references** are to the Subject Index.

9. **Water of hydration** is not made a part of the formulas indexed but is usually given in light-face type following the formulas.

10. **Polymers** having different names and recognized as different substances, *e. g.*, acetaldehyde and paraldehyde, are all entered under their accepted formulas. But definite compounds for which different polymeric formulas are in use are entered under the simplest formula only with a cross-reference under the polymeric formulas.

11. **A straight line**, thus —, used under some headings to avoid repetition of names, always stands for the name of the "index compound," *i. e.*, that part of the preceding name (inverted) which comes before the comma.

12. "P" before a page number indicates that the abstract is of a patent.

13. The names **beryllium** (Be) and **columbium** (Cb) are given preference over **glucinum** (Gl) and **niobium** (Nb), respectively, for these elements.

The Key to a formula index is necessarily lengthy. It would not be correct to conclude from this that this index is difficult to use. Experience is to the contrary.

INTRODUCTION.

General purpose and policy. The location of chemical compounds in an index by names is at times uncertain because names vary and in the case of complex compounds may be difficult to ascertain. New compounds are constantly being prepared, which, if named at all, may receive more than one name which is justified from one point of view or another and the possibilities of incorrect names are great. Since the kind and number of component atoms of a chemical compound are its most unvarying characteristics this supplementary Formula Index to *Chemical Abstracts* has been published for the purpose of eliminating this element of uncertainty in the Subject Index. Except that unnamed compounds are no longer entered under the heading "Compound," the Subject Index is in no way altered on account of the Formula Index. In the Subject Index related compounds are *grouped* rather effectively and to good use by the present system of indexing on the basis of "parent compounds" or more accurately "index compounds;" in the Formula Index the certain location of *individual* compounds is the primary consideration. The Subject Index is more convenient to use in some respects and it frequently contains more information in the form of modifying phrases. The repetition of modifying phrases in the Formula Index beyond necessary brief phrases to indicate derivatives has been avoided as unnecessary for the accomplishment of the real purpose of this index, as stated above, and as inconsistent with necessary economy. Isomerism is in some cases not indicated in the Formula Index but is in the Subject Index whenever known. Ready reference to the Subject Index for the purpose of locating information regarding related compounds is made possible by the use in the Formula Index of names following the formulas written exactly as they appear in the former index.

All new compounds and all compounds for which new data are given have been entered. Most of the compounds have been entered under their own formulas. Some departure from a policy of making separate formula entries for derivatives of all kinds is reasonable and accords with custom. The only departures in this index (see ¶ 3 of the Key) have been in classes of compounds the natures of which would be more than likely apparent to the investigator. The interest in a salt of a complex organic acid, for example, is likely to be mainly in the acid and it is considered more valuable to have the record of it under the formula of the acid for the use of searchers looking up that acid.

In the case of unnamed organic compounds where possible the class, as acid, source and melting or boiling point have been given.

Cross-references to the Subject Index have been used for all simple inorganic compounds, for all minerals of definite composition and for the organic compounds more commonly met with, in general whenever it seemed likely that users of *Chemical Abstracts* would predominately refer to the Subject Index.

The system. The system, as described in the Key, is, with slight modifications, that worked out by Dr. Edwin A. Hill¹ and used by the Classification Division of the U. S. Patent Office. This system is preferred to the system of Richter's *Lexikon* because of its greater simplicity and its applicability with equal fitness to inorganic as well as to organic compounds.

ABBREVIATIONS USED IN CHEMICAL ABSTRACTS.

[α] specific rotation	contg. containing
[α] _D ²⁰ , for 20° and sodium light)	cor. corrected
abs. absolute	c. p. candle power
Ac acetyl (AcH, acetaldehyde; AcOH acetic acid)	c. p. chemically pure
a. c. alternating current	crit. critical
addn. addition	cryst. crystalline (not crystallize)
alc. alcohol	crystd. crystallized
alk. alkaline (not alkali)	crystn. crystallization
alky. alkalinity	cu. m. cubic meter
Am amyl	d. density (d_M , specific gravity at 13° referred to water at 4°; d_{40}^{20} , at 20° referred to water at the same temperature)
amp. ampere(s)	d. c. direct current
amt. amount	decompn. decomposition
anhyd. anhydrous	deriv. derivative
app. apparatus	det. determine
approx. approximate, approximately	detd. determined
aq. aqueous	detg. determining
at. atomic	detn. determination
atm. atmosphere(s), atmospheric	dil. dilute
at. wt. atomic weight	diln. dilution
av. average (except as a verb)	distd. distilled
b. (followed by a figure denoting temperature) boils at, boiling at (similarly b_M , at 13 mm. pressure)	distg. distilling
bacteriol. bacteriological	distn. distillation
b. p. boiling point	elec. electric, electrical
B. t. u. British thermal unit(s)	e. m. f. electromotive force
Bu butyl (normal)	equil. equilibrium
Bz benzoyl (BzH, benzaldehyde; BzOH benzoic acid)	equiv. equivalent
cal. calorie(s)	est. estimate
calc. calculate	estd. estimated
calcd. calculated	estg. estimating
calcg. calculating	estn. estimation
calcn. calculation	Et ethyl (Et ₂ O, ethyl ether)
cc. cubic centimeter(s)	evap. evaporate
chem. chemical (not chemistry)	evapd. evaporated
cm. centimeter(s)	evapg. evaporating
coeff. coefficient	evapn. evaporation
com. commercial	examd. examined
compd. compound	exang. examining
compn. composition	examn. examination
conc. concentrate	expt. experiment
concd. concentrated	exptl. experimental
concn. concentration	ext. extract
cond. conductivity	extd. extracted
const. constant	extg. extracting
	extn. extraction

inorg. inorganic	prepg. preparing
insol. insoluble	prepn. preparation
kg. kilogram(s)	qual. qualitative
kw. kilowatt(s)	quant. quantitative
l. liter(s)	recrystd. recrystallized
lab. laboratory	resp. respectively
lb. pound(s)	r. p. m. revolutions per minute
m. meter(s); also (followed by a figure denoting temperature) melts at, melting at	sapon. saponification
manuf. manufacture	sapond. saponified
max. maximum	sapong. saponifying
Me methyl (MeOH, methanol)	sat. saturate
mech. mechanical	satd. saturated
mfg. manufacturing	satg. saturating
mg. milligram	satn. saturation
min. minimum (also minute(s))	sec. second(s)
mixt. mixture	sep. separate
mol. molecule, molecular	sepd. separated
mol. wt. molecular weight	sepg. separating
m. p. melting point	sepn. separation
n index of refraction (n_D^{20} , for 20° and sodium light)	sol. soluble
N normal	soln. solution
no. number	soly. solubility
org. organic	sp. specific
p. d. potential difference	sp. gr. specific gravity
pharmacol. pharmacological	sq. cm. square centimeter(s)
phys. physical	sym. symmetrical
physiol. physiological	temp. temperature
